VIZIJ AFTERNOON WORKSHOP

Participant Workbook

Use this workbook during the session to track the hands-on steps, success checks, and breakout outputs. The goal is not to take perfect notes. The goal is to stay oriented and leave with a concrete mental model of the Vizij stack.

2:30 pm to 6:00 pm | Hands-on first | Current Vizij apps

Agenda and Outcomes

Agenda

1. Introduction and teaser demo
2. Activity 1, face design and control
3. Support and exploration
4. Activity 2, animation, integration, deployment
5. Support and exploration
6. Coffee break
7. Roadmap, research, strategy breakouts
8. Close

Outcomes

- Load and control a face
- Read the path model
- Understand authoring and rigging basics
- Explain animation and live control
- Describe the deployment story

Quick Path Cheat Sheet

Standard Input

```
rig/{face}/standard/{channel}/{track}/{attribute}
```

Pose Weight

```
rig/{face}/poses/{pose_name}.weight
```

Viseme Weight

```
rig/{face}/visemes/{viseme_id}.weight
```

Activity 1: Face Design and Control

What to Do

1. Open `vizij-authoring`.
2. Load a sample GLB.
3. Find one eye control, one mouth control, and one pose control.
4. Open `tutorial-fullscreen-face`.
5. Move the mouse and press hotkeys to confirm live control.

Success Check

- I can describe one standard path pattern.
- I can describe one pose-weight path pattern.
- I can make a face move on purpose in the runtime.

Notes: What feature path made the most sense to you? What still felt confusing?

Activity 2: Animation, Integration, Deployment

Animation

- Use `demo-vizij-player`
- Identify rigs, clips, and diagnostics
- Explain how authored clips and live inputs can coexist

Integration

- Observe `tutorial-agent-face`
- Compare baseline, synth, and align mouth modes
- Notice status chips, expression controls, and lead tuning

Deployment

- Use `vizij-standalone` as the deployment anchor
- Understand the WebSocket control surface
- Connect the same path model to a robot-facing runtime story

Notes: What changed when the system moved from authored clips to live control?

Support and Exploration

If You Are Blocked

- Ask for help with install, assets, paths, or runtime behavior.
- Use the facilitator demo as the reference path.
- Keep moving through the worksheet even if one live integration fails.

If You Are Unblocked

- Compare another sample GLB.
- Inspect runtime hooks in the tutorial app.
- Write one roadmap or product question for the breakout hour.

Breakout Worksheet

Opportunity

What feels most promising in Vizij after today’s workshop?

Blocker

What most limits adoption, confidence, or deployment?

Next Experiment

What should happen next to validate or unlock the opportunity?
